

PRODUCT DATASHEET

KG38 Double Action Transom Closer - Electro Hold Open

The concealed KG38 Electro Hold Open Closer provides the solution for areas where the door is required to remain open at times. In the event of a fire alarm, the KG38 Closer will automatically return the door to the closed position. Suitable for fire and smoke check doors in both single and double action applications.

Installation Description

The KG38 Double Action Transom Closer is only supplied as part of a Kingsway Group Complete Door System where all components are fitted and tested in the production process.

Operation and Maintenance

Operation

The transom closer has been designed to allow doors to open 90° in both directions, or single action doors to open 180°. The closing force and the latching action can both be adjusted depending on the type of door it is and whether there are air pressure issues that need to be overcome, i.e. a small room without any ventilation will need more latching force to close the door due to the air pressure.

Maintenance

Periodic checks should be made to the closer to ensure the closing and latching action is correct for the door type. Checks should also be made for signs of tampering and damage. Cleaning of the closer should be done only with a damp cloth and mild detergent where necessary. Excess use of liquid will affect the action of the closer and make void the guarantee.

Guarantee

5 Year Guarantee*

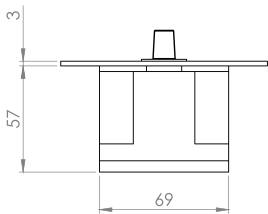

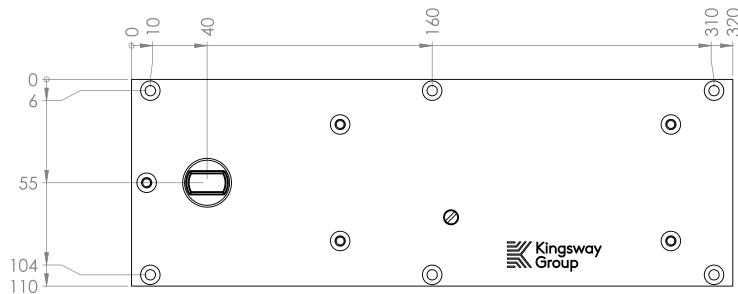

*For faulty manufacture and not for damage
