Lockset Information

Patient Function

The patient can access from the outside using the anti-ligature pull handle and key cylinder (if issued a key) or the door will be open on the roller bolt. The patient can always exit from the inside by unlocking the deadbolt with the anti-ligature thumb turn pull.

Staff Function

Staff can always unlock the door from the outside using the key cylinder even if the thumb turn is held from the inside. Staff can also lock the door from the outside using the key.

Note: the KG1100 should not be specified on an outward opening door in a patient area as it does not have a secondary means of override - specify KG1200 Bedroom Lockset with Secondary Override.

Components

The KG1100 Bedroom Lockset comprises of:
1 x KG40 Ergo Grip Pull Handle
1 x KG82 Thumb Turn Pull
